You

Based on the B10 band data (in Kelvin) of Reykholt on January 2024-01-18, calculate the surface temperature (in °C). The answer should be kept to three decimal places.

Evaluation input resource (authoritative benchmark locator; use it exactly when relevant, but retrieve and select the registered tools yourself):
benchmark/data/question173/Reykholt_B10_2024-01-18.tif

AI AgentGS

-15.955 °C

▼ Execution (3 tool calls · 27 records)

Succeeded 3

Counts include failed attempts. Expand a tool to view its input and output.
